Berkeley Hotel

Bangkok, Thailand

What strategic directions must enterprises consider to gain competitive advantages on the future of cloud?

Technology Focus...Today

Technology core

A lot of the hyperscalers pioneer the base infrastructure services

Capability enhancement

*on technology core
IaaS, PaaS, SaaS*

Business Disruption...Tomorrow

Cloud-native adoption
i.e. the Future of Enterprise AI

Multi-cloud strategy

Industry cloud acceleration

Sovereign cloud considerations

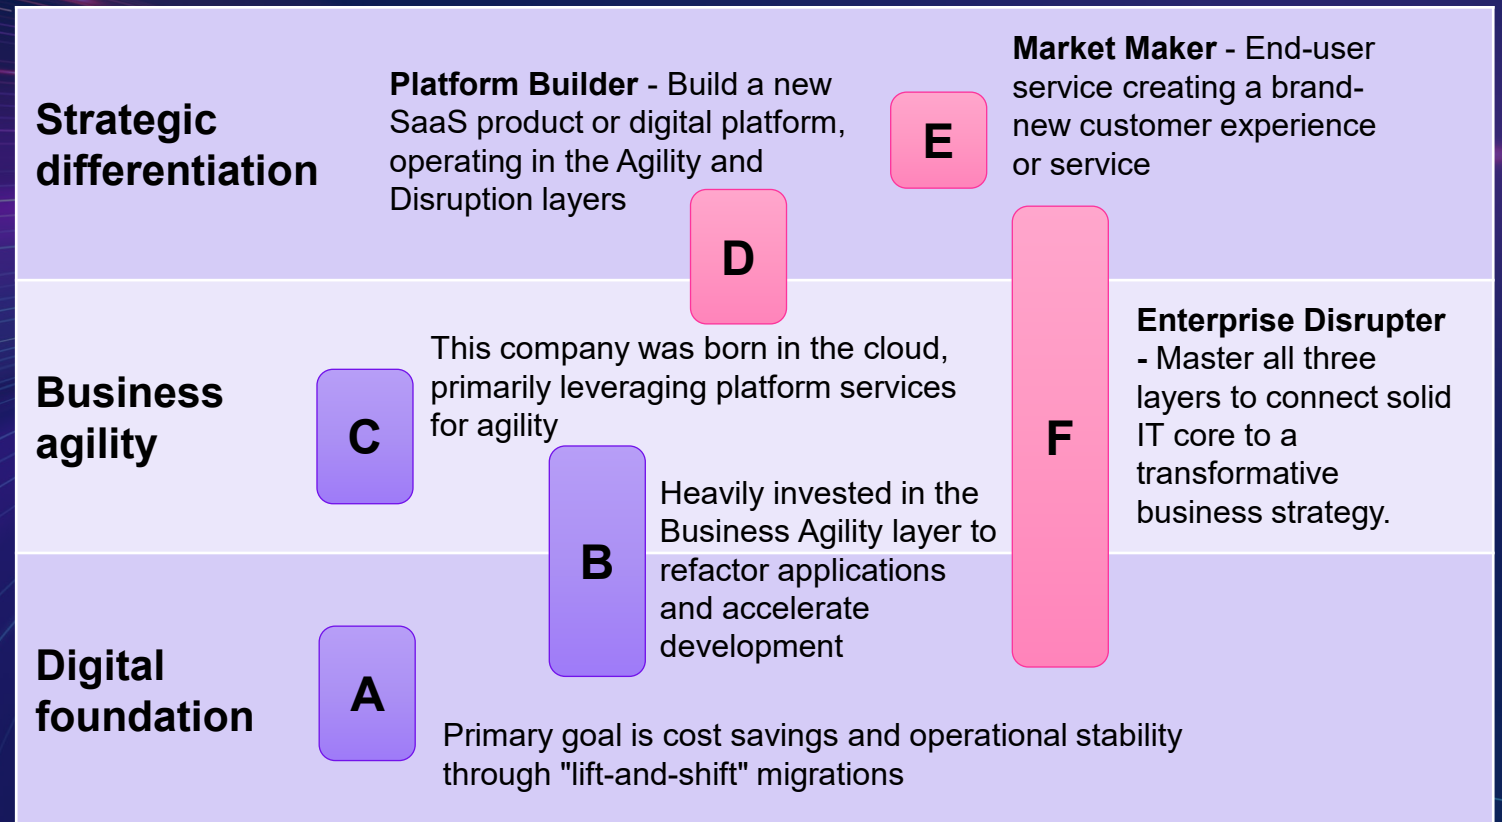

Leaders in digital transformation see cloud adoption as the engine for business disruption.

The future of IT

KPMG Global Tech Report 2023/2024

XaaS Champion

- Exponential shift from on-premises to IT consumed as a service (XaaS)
- 64 percent of respondents increased profitability or performance as a result of their digital transformation efforts with public cloud and XaaS technologies

The macro-economic landscape of global cloud consumption

Worldwide End-User Spending on Public Cloud Services

Source: Gartner Report

AI cloud titans race for trillions: Tech firms set to spend over USD 1 trillion on data center by 2026

Cloud suppliers and chipmakers are driving an AI boom, investing trillions to build new data centers and reshape enterprise technology.

AI disruption is now the core infrastructure for all enterprises; treating it as optional is no longer viable.

Agentic AI market analysis

- As advancements in technology continue to accelerate, leaders are charting a course to capitalize on innovative AI software functionalities.
- According to IDC – By 2029, 55% of the A2000 will suffer combined annual losses totaling over US\$50 billion because of tech debt and lack of modernization as they struggle to protect older infrastructure and meet demand for AI.

US\$749B

By 2028, Global AI spending will surpass 749 billion

Source: IDC

US\$47 billion

The Global Agentic AI market size is expected to be worth around USD 47.1 billion by 2030, from USD 5.1 billion in 2024

Source: Gartner

CAGR => 44%

Agentic AI market is growing at a CAGR of 43.8% during the forecast period from 2025 to 2034.

Source: Market US

2028: 33%

Gartner predicts that by 2028, 33% of enterprise software applications will include Agentic AI.

2024: Less than 1%

Source: Gartner

The KPMG AI Quarterly Pulse Survey reveals that 51% of organizations are exploring the use of AI agents, with another 37% piloting them.

Geographical analysis: a world of differentiated cloud adoption

Rank	Region/country	2024 public cloud spending (USD billions)	Global market share (%) of public cloud	Key growth drivers/market characteristics
1	United States	\$432+	53%	<ul style="list-style-type: none"> Mature, hyperscaler-led AI-driven innovation Early adopter of new technologies
2	Western Europe	\$167	21%	<ul style="list-style-type: none"> Strong growth Heavily influenced by data sovereignty & GDPR Steady adoption
3	China	\$40	N/A	<ul style="list-style-type: none"> Second-largest country market Dominated by local providers Geopolitically isolated
4	Asia-Pacific (excl. Japan and China)	\$51+	6%	<ul style="list-style-type: none"> Fastest-growing region Mobile-first Driven by digital transformations & emerging economies
Key highlights from the Asia-Pacific (APAC) region		<ul style="list-style-type: none"> APAC is forecasted to achieve the highest CAGR of any region with estimates as high as 25%. The expected total cloud spending is estimated to be beyond US\$200 billion annually. Rapid economic development in countries like India and Indonesia, coupled with increasing internet and mobile penetration, is creating a massive new user base for digital services.

Dissecting the cloud service stack: IaaS, PaaS, and SaaS

- The global cloud computing market is not a single entity but a layered stack of services, each catering to different needs and exhibiting distinct market dynamics.
- The three primary service models: Software as a Service (SaaS), Platform as a Service (PaaS), and Infrastructure as a Service (IaaS) form the core of this stack.

Service model	2024 spending (USD billions)	2025 projected spending (USD billions)	Year-on-Year growth (%)	Key growth drivers
Software as a Service (SaaS) <i>The Dominant Incumbent</i>	\$250	\$300	18.1% - 19.2%	<ul style="list-style-type: none"> • Business applications (CRM, ERM) • Ease of deployment • Mature market
Platform as a Service (PaaS) <i>The Engine of Innovation</i>	\$172	\$209	19.1% - 21.6%	<ul style="list-style-type: none"> • Application development needs • Data management requirements • AI platforms (51.1% CAGR)
Infrastructure as a Service (IaaS) <i>The High-Growth Foundation</i>	\$170	\$212	21.3% - 24.8%	<ul style="list-style-type: none"> • AI/ML workloads • Big data analytics • Digital transformations • Raw compute/storage needs

The future of cloud is industry-specific

More than 70% of enterprises by 2027 will use industry clouds to accelerate their business initiatives. Source: Gartner

Factors accelerating adoption of industry clouds

Sector-specific compliance needs

Strict compliance standards and specialized security features varying across industries.

Packaged industry solutions

Unified, end-to-end custom solutions

Cloud as a utility

Organizations set data standards, enabling interoperability and reuse

Emerging tech implementation

Leverage AI, ML, IoT to streamline operations

Building trust in the cloud

Top cyber threats in today's cloud landscape:

Malware that has moved laterally to cloud workloads

Unauthorized access by a third party

Attacks that result in data loss due to insecure use of APIs

Misuse of a privileged account, secrets, or access keys via stolen credentials

Top solutions to fighting these threats:

realities**

The future of cloud

**FinOps first
value themes**

**Revolution with
agentic AI**

Cloud adoption realities - By organizational scale

Organization types	Top challenges	Primary value theme
<i>Large corporations</i>	Multi-cloud & cloud+ complexity	Enterprise-wide value realization
<i>Medium enterprises</i>	Expertise gap & tooling complexity	Operational efficiency & ROI
<i>Small & medium sized enterprises (smes)</i>	Foundational visibility & predictability	Cost predictability & control
<i>Tech startups</i>	Burn rate management & efficient growth	Capital efficiency for investors

Multi-cloud progression towards cloud maturity adoption

Comparing IT service models: Legacy, public and private cloud

Legacy premises IT

- **Traditional on-site servers** and dedicated appliances in your own data center or plant room.
- **Single-tenant**, owned infrastructure managed by your IT team.
- **Limits:** Lower elasticity, longer provisioning, CapEx heavy.

IBM ACS 400

On-prem ERP (SAP ECC, Oracle E-Biz)

Local file/print servers, AD DS

Public cloud SaaS

- **Complete applications delivered over the internet;** you configure and use, provider runs everything else.
- **Subscription software** accessed via browser/API.
- **Benefits:** Fastest time-to-value, minimal ops, continuous updates.

Microsoft 365, Google Workspace

Salesforce, ServiceNow, Workday

SAP S/4HANA Cloud (public edition)

Public cloud IaaS/PaaS

- **Elastic infrastructure and managed platforms** for building and running your own applications.
- VMs, containers, databases, functions, and integration services in **public regions**.
- **Benefits:** Pay-as-you-go, global reach, broad service catalog.

Azure VMs, Azure Kubernetes Service (AKS)

Azure SQL Database, Azure Functions

AWS EC2, RDS, Lambda

Google Cloud Run, BigQuery

Private cloud

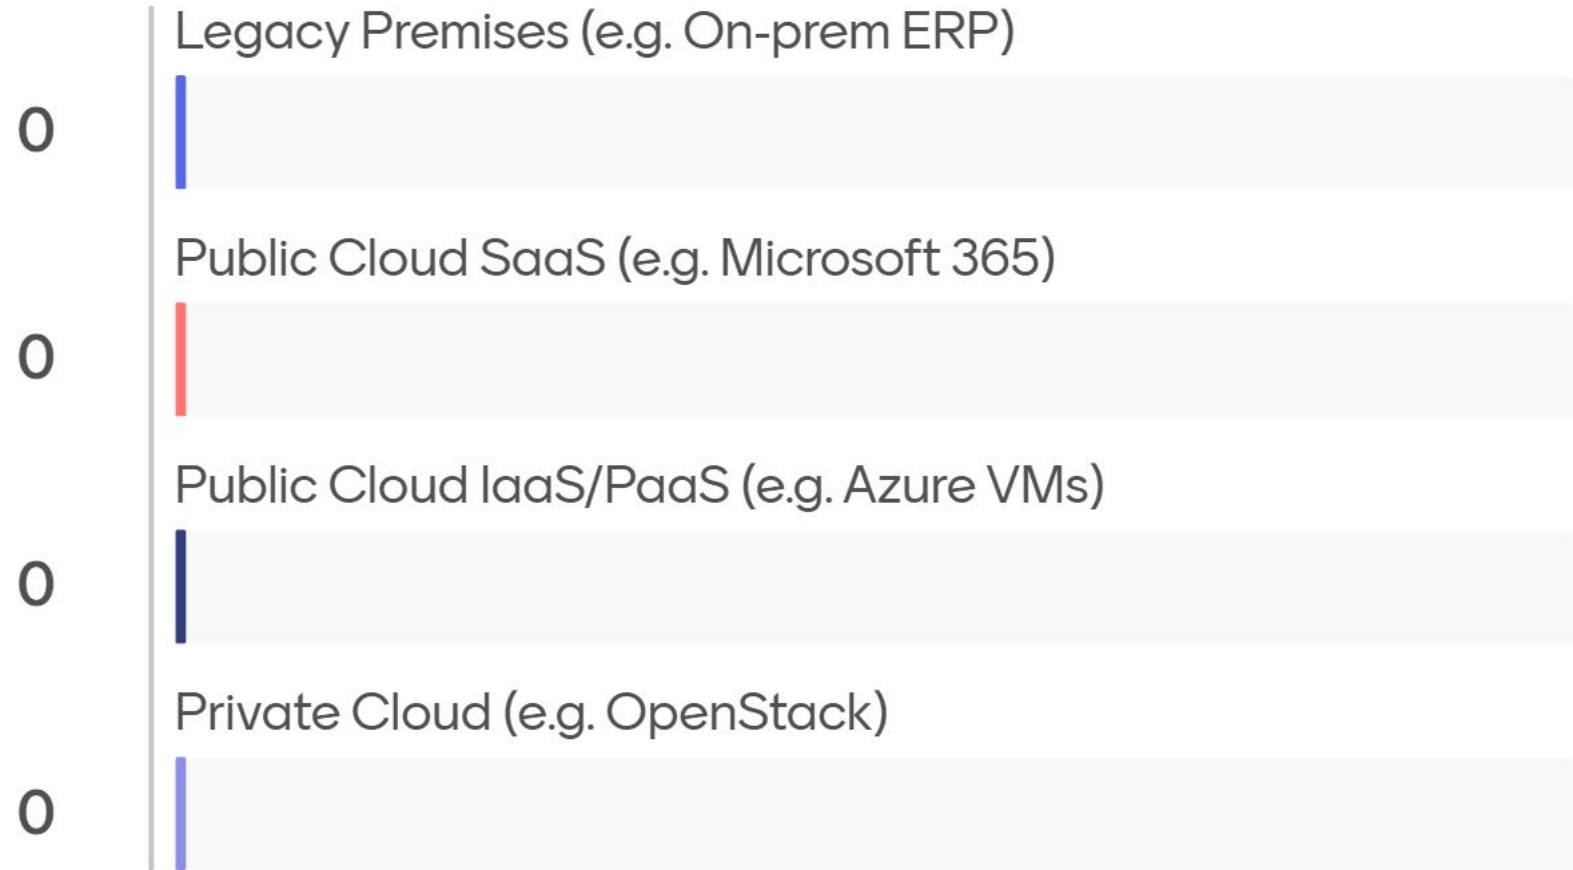

- **Single-tenant cloud** operated for one organization, often on-site or in a dedicated hosted facility.
- Cloud characteristics on **dedicated hardware**.
- **Isolation, latency, or residency demands** (e.g., plant-floor systems, regulated data).
- **Limits: Scale bounded by your capacity;** fewer managed services than public cloud.

Azure Stack Hub/Azure Stack HCI on-prem

OpenStack or VMware/vSphere with automation

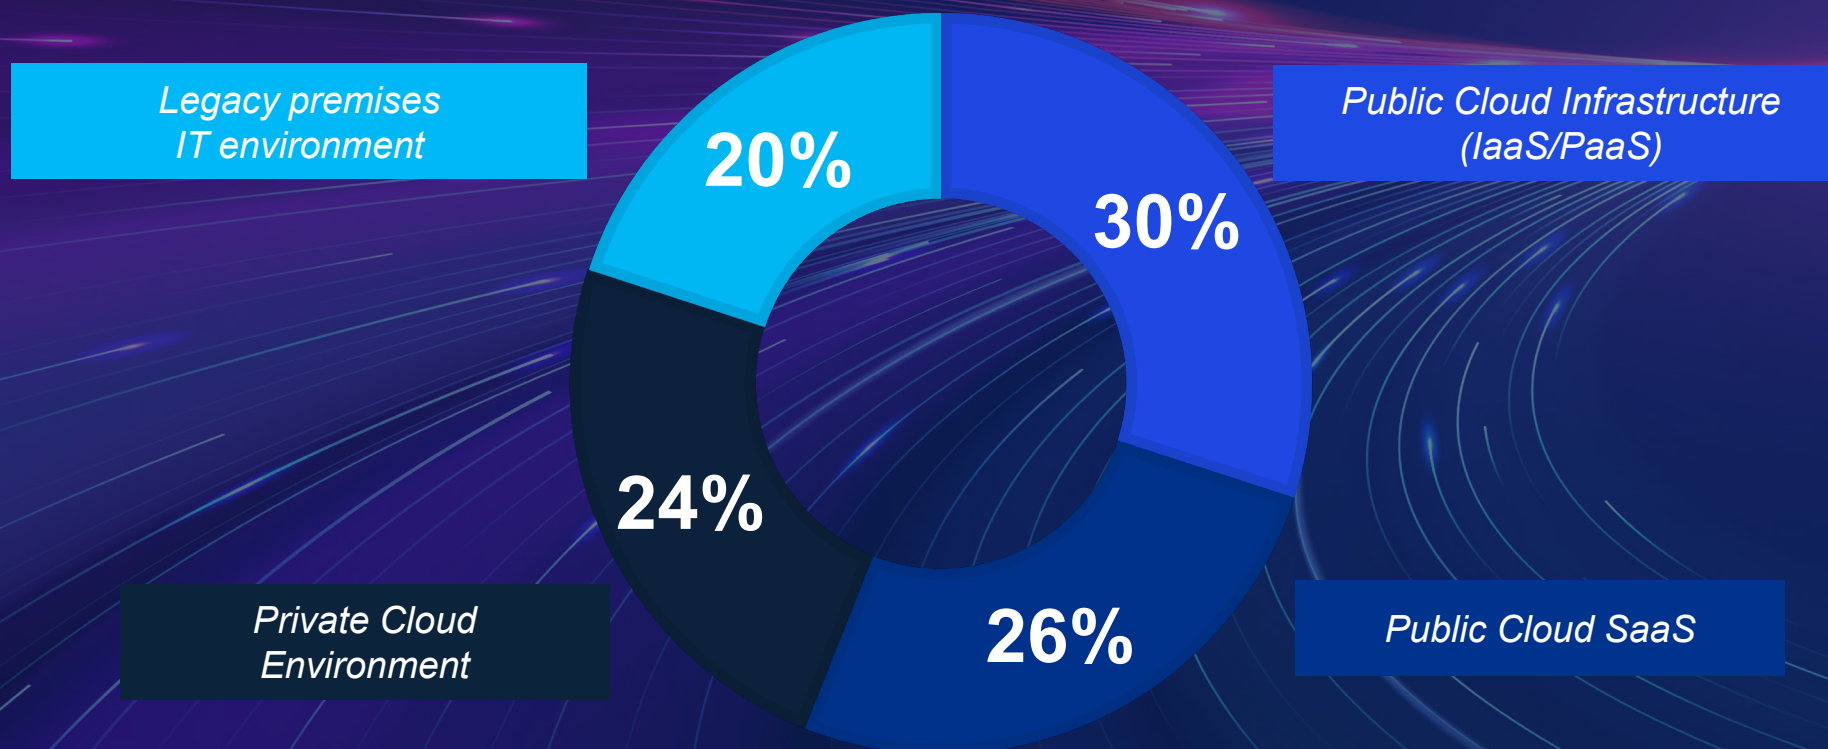

Managed private cloud in a dedicated colocation

36 months from now, approximately what percentage of all your organization's business applications will be run in the following ways?

Q. 36 months from now, approximately what percentage of all your organization's business applications will be run in the following ways?

KPMG estimates the demand for as-a-service public cloud will overtake demand for traditional IT in the next three to five years and, as a result, we believe public cloud could generate twice as much revenue as traditional IT workloads.

Driving cloud ROI: The critical partnership between CFO and CIO

CFO

CIO

As AI and cloud integration accelerate, closer alignment between CFOs and CIOs enables shared responsibility and faster, more effective financial reporting and operational outcomes.

Q. How would you describe the current relationship between the CFO and CIO in your organization?

CIOs and CFOs characterize their relations as collaborative.

Source: [KPMG CFO-CIO Collaboration Survey 2025](#)

Q. To what extent do you think CFO-CIO collaboration has the most potential to make an impact on the following business outcomes?

More CFOs believe their collaboration with CIOs has a significant impact on operational efficiency and risk management.

Source: KPMG CFO-CIO Collaboration Survey 2025

Q. What are the most common points of contention between the CFO and CIO in your organization?

CFOs and CIOs have differing perspectives around ROI and understanding technology capabilities.

Source: KPMG CFO-CIO Collaboration Survey 2025

Adopting FinOps is critical to unlocking full value of cloud.

78%

of organizations see business growth as a key benefit of cloud adoption.

Source: ISG

84%

of companies cited managing cloud spending as their single biggest hurdle in cloud environment.

Source: Flexara

97%

invested in multiple AI infrastructure areas, highlighting the growing need for FinOps practitioners to manage AI-related spending.

Source: State of FinOps

85%

of organizations either have a FinOps team or planning to have one in the next 12 months or beyond.

Source: State of FinOps

Cloud FinOps covers:

Cost management

- Real time cost monitoring
- Cost allocation and tagging
- Showback and chargeback
- Automated cost optimization

Resource optimization

- Rightsizing resources
- Identifying idle resources
- Automated scaling
- Utilize cost-effective options

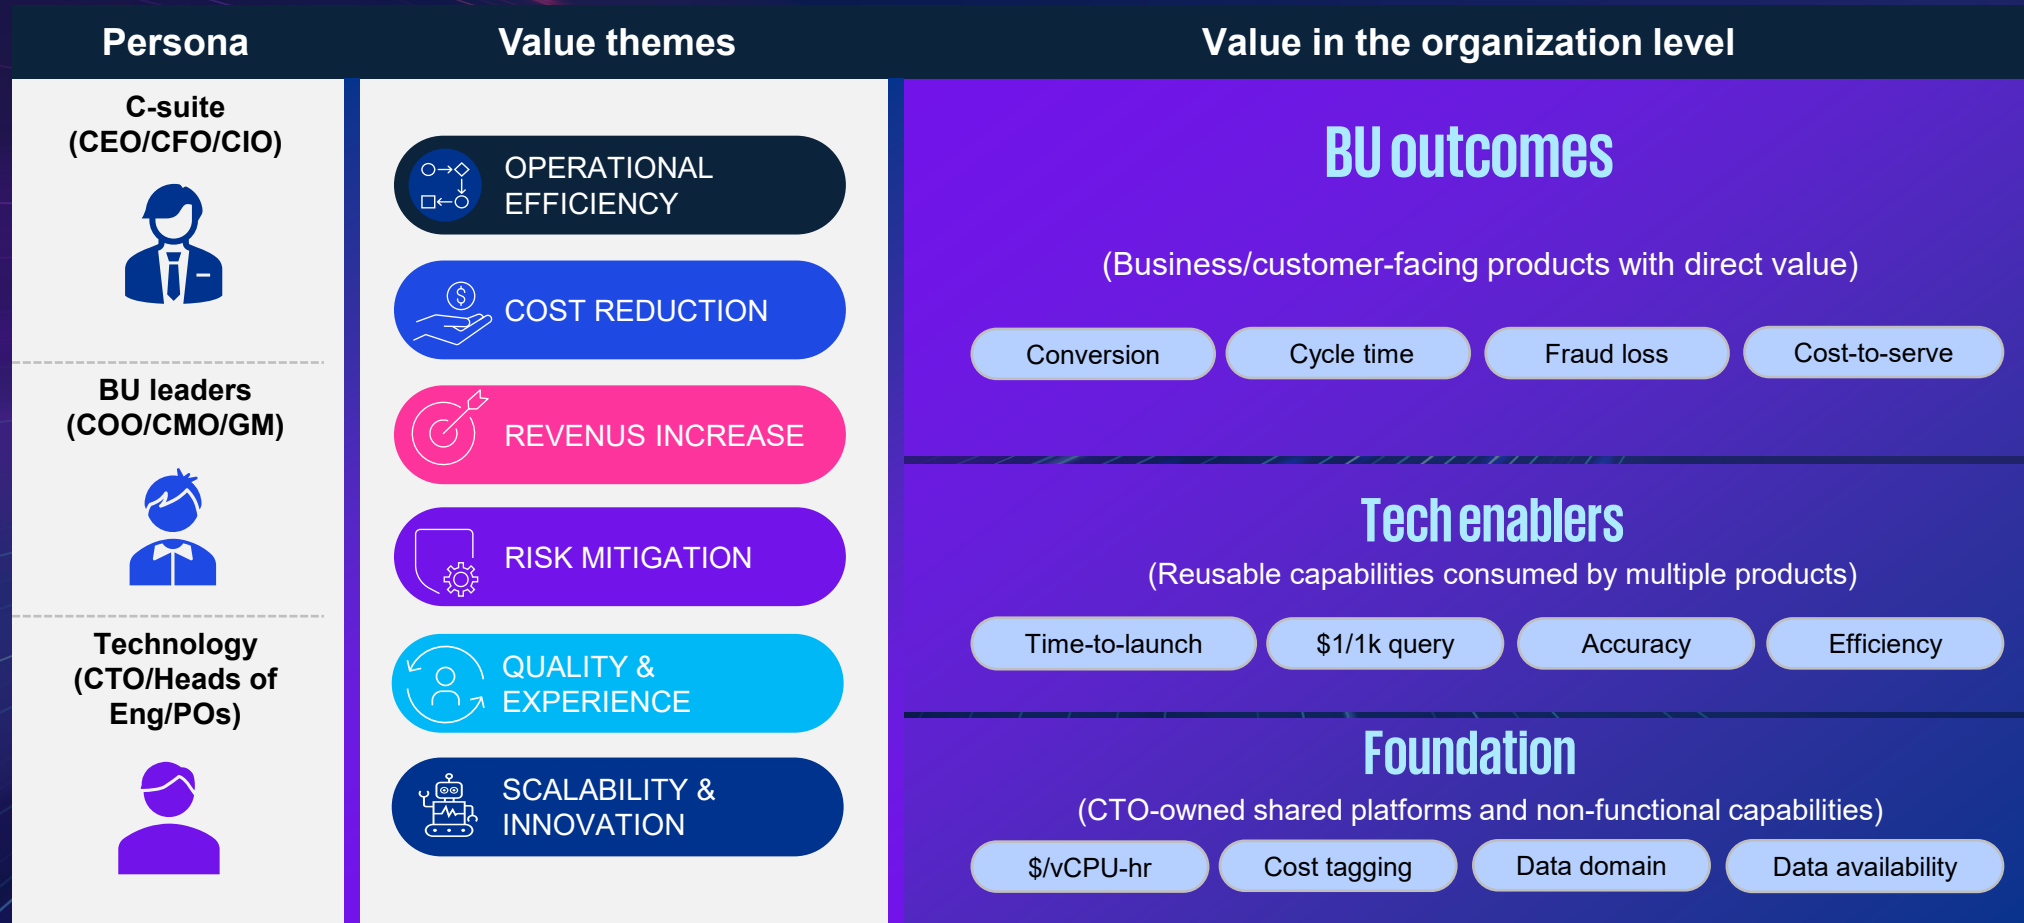

Compliance and governance

- Policy enforcement
- Audit trails
- Access controls
- Regular reviews and reporting

Budgeting and forecasting

- Historical data analysis
- Predictive analytics
- Scenario planning
- Continuous monitoring and adjustment

FinOps first plus value themes embedded across the organization

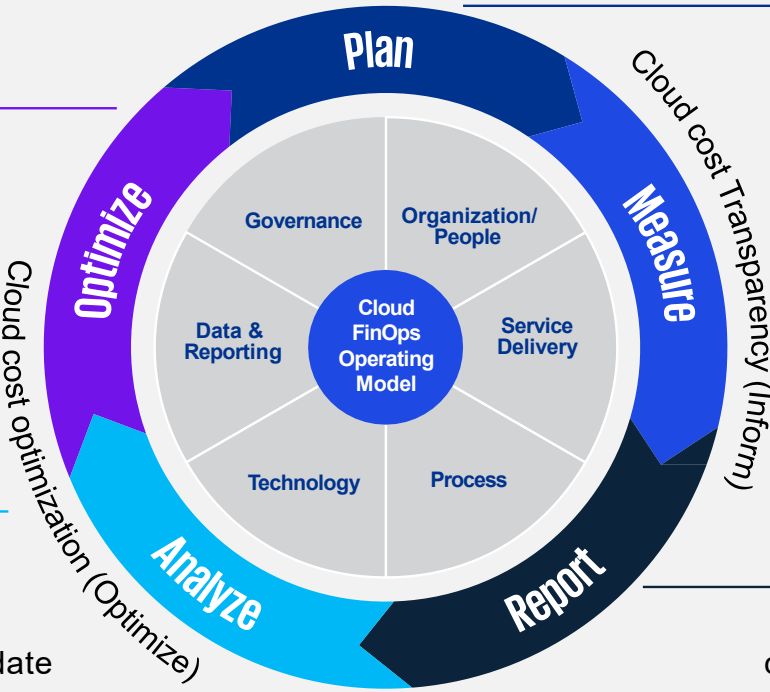

Measuring the success of your FinOps journey

Innovation project measurement of success = $\frac{\text{Business value metrics (Data} \times \text{AI} \times \text{Analytics)}}{\text{Cloud FinOps (Inform} \gg \text{Optimize} \gg \text{Modernise)}}$

KPMG's approach

 Drive accountability for implemented changes to improve performance and reduce costs

 Identify optimization opportunities and collaborate with platform/architecture teams to validate and prioritize opportunities

Determine the best cloud environment, modernization path, and cost, ahead of the move to the cloud

Establish KPIs, forecast costs, understand usage and actual costs, and identify trends/red flags

Relay cost insights (usage, costs, budget variances and trends) to all stakeholder groups
